Read the full review at www.dpreview.com I've been using Photoshop demo versions since version 1.0, and I've enjoyed using Lightroom, although I'm a Photoshop user, I had no reason to switch until CC came along. However, I had started using Lightroom 5.0.5 back in February thinking I'd update to 5.1 or 5.2 when they were released. However, I still use Photoshop, so I go weeks without editing my photos, so I decided to wait until this evening, when Adobe released a beta version of the next major version of Lightroom. I felt it was time to write my first review of version 5.2. So, I downloaded the beta version and will be using it over the next couple of weeks. When I first started importing photos back in the day, there were lots of discussions and articles debunking the idea that Lightroom was a photo editing app. While you can definitely do a good Photoshop job, Lightroom gives you a lot of help with photographic editing, so you can use both apps together in different ways such as to correct exposure and convert photos before adding effects.
